| Low Density Polyethylene Plant (LDPE)<br>HIP-Petrohemija d.o.o.  | Identification number:<br><b>TUS-HIPP-1348</b> |
|  | Date:<br>27/08/2024                            |
| <p align="center"><b>SPECIFICATION OF THE INPUT MATERIAL</b></p> <p align="center"><b>Lubricating oil for C-202 compressor cylinders</b></p> |  |

|   |  |                             |                        |       |                         |
|---|--|-----------------------------|------------------------|-------|-------------------------|
| 1. Product name/chemical name:            | Lubricating oil for compressor cylinders:<br><i>Mineral oil of petroleum origin</i>  |                             |                        |       |                         |
| 2. SAP code:                              | 8103410  |                             |                        |       |                         |
| 3. Technical description:                 | Lubricating oil for C-202 compressor cylinders<br>Physical appearance: colourless liquid<br>Flammability: flammable  |                             |                        |       |                         |
| 4. Physical and chemical characteristics: | Item number  | Characteristic              | Method                 | Unit  | Range of allowed values |
|   | 1.   | Density at 15 °C            | SRPS<br>EN ISO<br>3675 | kg/m³ | 860-880                 |
|   | 2.   | Viscosity at 40 °C          | SRPS<br>ISO<br>3104    | mm²/s | 200-240                 |
|   | 3.   | Content of antioxidant A-15 | -                      | ppm   | 2000-3000               |
| 5. Technical/accompanying documentation:  | The Supplier is obliged to submit: <ul style="list-style-type: none"><li>- Safety data sheet , in Serbian</li><li>- Test report</li><li>- Data sheet on safety measures</li><li>- Delivery note</li></ul>  |                             |                        |       |                         |
| 6. HSE requirements:                      | -  |                             |                        |       |                         |
| 7. Delivery and labelling:                | The raw material is delivered by trucks, packed in metal barrels, weighing 200 kg.<br><br>The following information must be clearly entered on each package unit: <ul style="list-style-type: none"><li>- Product name</li><li>- Data on the manufacturer</li><li>- Net mass of the package unit</li><li>- Production date</li></ul> |                             |                        |       |                         |

|                                  |   |
|----------------------------------|---|
| 8. Transport:                    | -   |
| 9. Product eligibility criteria: | The raw material is acceptable if it meets the allowed tolerances in all aspects, or all the requirements given in this specification. The material is procured from the approved suppliers, who guarantee the quality. The Supplier receives the status "Approved" after a successful industrial trial run and laboratory tests. |
